

LEVEL OF SERVICE MEMORANDUM

To: Gray & Osborne, Inc.
From: Matthew Palmer, PE
Project: Algona Traffic Operations, GTC #20-295
Date: March 29, 2022

This memorandum summarizes the existing, future 2027 and future 2041 traffic level of service operations at 4 study intersections identified by the City of Algona.

Data Collection

PM peak-hour turning movement data was collected by IDAX at the 4 study intersections on Tuesday, September 28, 2021. The data included pedestrian and bicycles utilizing the intersections as well as vehicular traffic. The study intersections are:

1. Algona Blvd at Main Street
2. W Valley Hwy at 1st Avenue N
3. Algona Blvd at 1st Avenue N
4. Milwaukee Blvd at 1st Avenue N

The study intersections are shown in Figure 1 in the attachments.

Methodology

Traffic congestion is measured in terms of level-of-service (LOS). Peak-hour level-of-service was conducted and was determined using the methodology described in the Highway Capacity Manual (HCM) 6th Edition. In accordance with the Manual, road facilities or intersections are rated between LOS A and F, with LOS A being free flow and LOS F being forced flow or over-capacity conditions. A summary of the level-of-service criteria has been included in Table 1. The level-of-service at intersections is measured in terms of average delay per vehicle in seconds. For two-way stop controlled (TWSC) intersections, the level-of-service is determined by the worst case of all the calculated lane groups at the intersection. For signalized and all-way stop controlled (AWSC) intersections, the level-of-service is determined as an average delay for all the entering vehicles. The *Synchro 11* software was used to analyze the study intersections. The city adopted a level of service standard of D for arterials and LOS E for local access streets.

Table 1: Level of Service Criteria for Intersections

Level of ¹ Service	Expected Delay	Intersection Control Delay (Seconds per Vehicle)	
		TWSC/AWSC Intersections	Signalized Intersections
A	Little/No Delay	≤ 10	≤ 10
B	Short Delays	>10 and ≤ 15	>10 and ≤ 20
C	Average Delays	>15 and ≤ 25	>20 and ≤ 35
D	Long Delays	>25 and ≤ 35	>35 and ≤ 55
E	Very Long Delays	>35 and ≤ 50	>55 and ≤ 80
F	Extreme Delays ²	>50	>80

Intersection Level of Service

PM peak-hour turning movement data was collected by IDAX at the 4 study intersections on Tuesday, September 28, 2021. The existing turning movement counts are included in Figure 2. All of the counts were conducted during the PM peak-hours from 4-6 PM and the level of service is reported for the highest peak-hour over the multiple hour count period. No adjustments were made for Covid as data collection was put on hold until the State of Washington had lifted restrictions.

2027 Future volumes were calculated based on data for the City of Algona based on the projected population growth which showed a 0.58% growth rate (population in 2021 is 3,217, population projected in 2027 is 3,330 and the projected population in 2041 is 3,611). The 2027 Future volumes were therefore projected using a 1% compounding growth rate at all of the intersections to be conservative. The 2027 future turning movement volumes are included in Figure 3. No additional pipeline developments were added to the growth in the city.

2041 Future volumes were also calculated using same conservative 1% compounding growth rate at all the intersections. The 2041 future turning movement volumes are included in Figure 4.

¹ Source: *Highway Capacity Manual*, 6th Edition.

LOS A: Free-flow traffic conditions, with minimal delay to stopped vehicles (no vehicle is delayed longer than one cycle at signalized intersection).

LOS B: Generally stable traffic flow conditions.

LOS C: Occasional back-ups may develop, but delay to vehicles is short term and still tolerable.

LOS D: During short periods of the peak hour, delays to approaching vehicles may be substantial but are tolerable during times of less demand (i.e. vehicles delayed one cycle or less at signal).

LOS E: Intersections operate at or near capacity, with long queues developing on all approaches and long delays.

LOS F: Jammed conditions on all approaches with excessively long delays and vehicles unable to move at times.

² When demand volume exceeds the capacity of the lane, extreme delays will be encountered with queuing which may cause severe congestion affecting other traffic movements in the intersection.

The level of service analysis for the existing, 2027 future and 2041 future conditions are summarized in Table 2. The study intersections will operate at acceptable level of service with the future anticipated growth. The volumes at Algona Boulevard/Broadway Boulevard were so minor that they were combined with the Algona Boulevard/Main Street volumes to determine the level of service for the intersection.

Table 2: Intersection Level of Service Summary

Intersections	Existing Conditions		Future Conditions			
			Future Year 2027		Future Year 2041	
	LOS (Critical Approach)	Delay	LOS/ (Critical Approach)	Delay	LOS (Critical Approach)	Delay
1. Algona Blvd at Main Street	C (EB)	15.2 sec	C (EB)	15.8 sec	C (EB)	18.0 sec
2. W Valley Hwy at 1 st Avenue N	A	7.6 sec	B	10.1 sec	B	16.7 sec
3. Algona Blvd at 1 st Avenue N	B	10.2 sec	B	10.5 sec	B	11.9 sec
4. Milwaukee Blvd at 1 st Avenue N	A	8.4 sec	A	8.5 sec	A	8.9 sec

Collision Analysis

GTC has conducted a collision analysis at the study intersections for the latest complete 5-year reporting period from January 1, 2016, to December 31, 2020. Table 3 summarizes the data received by WSDOT.

Table 3: 5-Year Collision Summary

Intersection	Collision Type							Total Collisions	Collisions Per Year
	Rear-End	Entering at Angle	Opp. Dir.	Sideswipe	Same Dir.	Ped. / Cyclist	Fixed Object/ Other		
Algona Blvd at Main Street	0	0	0	0	0	0	0	0	0
W Valley Hwy at 1 st Avenue N	0	1	1	0	0	0	0	2	0.4
Algona Blvd at 1 st Avenue N	0	5	1	0	0	0	0	6	1.2
Milwaukee Blvd at 1 st Avenue N	1	2	0	0	0	0	0	3	0.6

The 5-year collision rate has been calculated using PM peak-hour volumes and a K-factor of 10 for conversion to average daily traffic. The 5-year collision rates are summarized in Table 4.

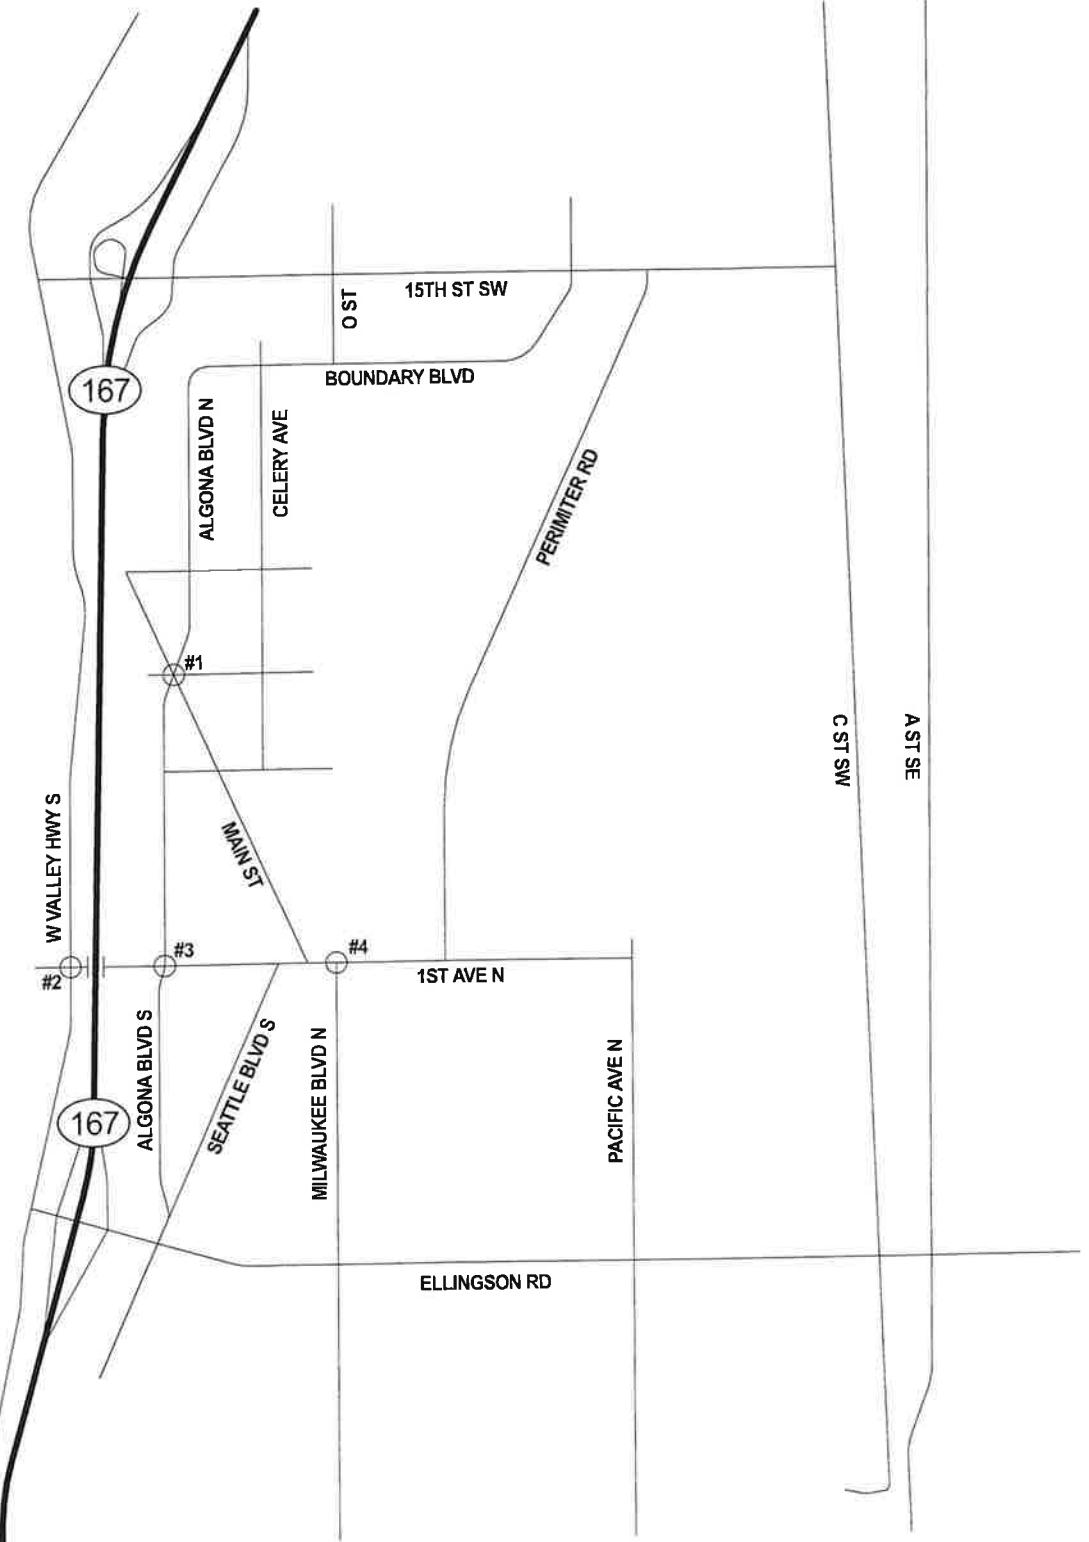

Table 4: 5-Year Collision Rate Calculation

Intersection	PM Peak-Hour Intersection Vol.	K-Factor	Total Collisions	Collision Rate ^[1]
Algona Blvd at Main Street	537	10	0	0.00
W Valley Hwy at 1 st Avenue N	1,385	10	2	0.08
Algona Blvd at 1 st Avenue N	567	10	6	0.58
Milwaukee Blvd at 1 st Avenue N	354	10	3	0.46

Typically, further safety analysis may be performed if intersection collision rates are higher than 1.0 collisions per million entering vehicles and/or collision frequencies are higher than 5 collisions per year for unsignalized intersections or 10 collisions per year for signalized intersections. None of the intersections have a collision rate greater than 1.0 and collision frequency higher than 5 collisions per year. None of the collisions resulted in an injury and none of the collisions involved a pedestrian or cyclist.

Figure 1 to Figure 4
Attachments (A-1 to A-36)

[1] The collision rate is based on Million Entering Vehicles.

Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 62.9

Natural Cycle: 80

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.79

Intersection Signal Delay: 10.1

Intersection LOS: B

Intersection Capacity Utilization 79.4%

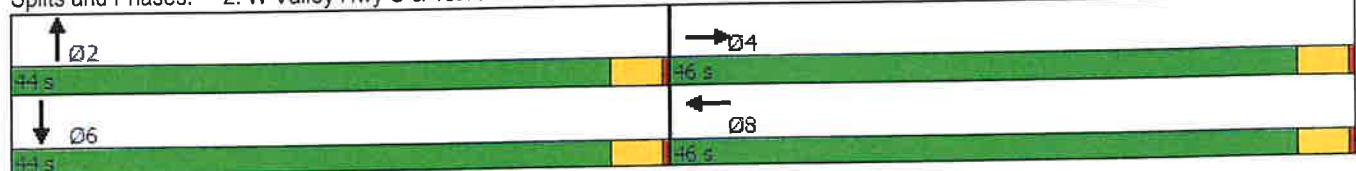

ICU Level of Service D

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 2: W Valley Hwy S & 1st Ave N

Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 62.2

Natural Cycle: 90

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.92

Intersection Signal Delay: 16.7

Intersection LOS: B

Intersection Capacity Utilization 89.9%

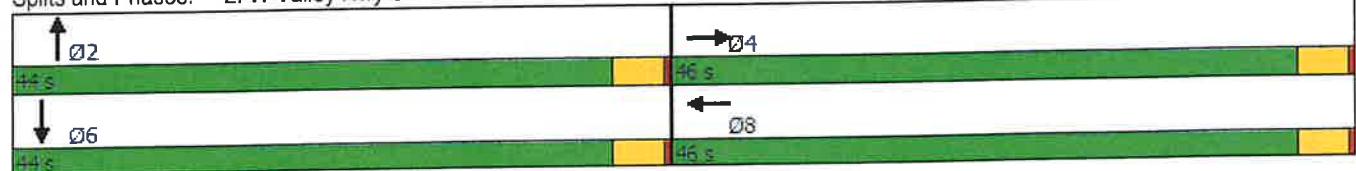

ICU Level of Service E

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 2: W Valley Hwy S & 1st Ave N
